

TERMINAL, METHOD AND COMPUTER PROGRAM PRODUCT FOR INTERACTING WITH A SIGNALING TAG

ABSTRACT OF THE DISCLOSURE

A terminal for interacting with a signaling tag includes a controller capable of receiving information regarding a signaling tag at least partially over an air interface. The controller is also capable of determining whether the controller is actively operating an application. In this regard, if the terminal is actively operating an application, the controller is capable of performing a predefined action based upon the application and a state of the application.
